Patent Abstract

EPB 98-17 0639632 Use of an additive for lead-free, spark-ignited internal combustion engine fuels for reducing valve seat recession.

INVENTOR(S)- Buchsbaum, Alexander, Dr. Simmeringer
Hauptstrasse 66/23 A-1110 Wien AT
INVENTOR(S)- Koliander, Werner, Dr. Humboldtgassee
23/14 A-1100 Wien AT

EXEMPLARY CLAIMS- Use, as an additive for unleaded petrols to prevent or reduce valve seat wear, of a neutral alkali metal and/or alkaline-earth metal salt of a mono- or diester of sulphosuccinic acid of the general formula (I) wherein R_{sup1} and R_{sup2}, independently of each other, represent hydrogen or an aliphatic hydrocarbon group, on condition that at most one of the residues R_{sup1} or R_{sup2} signifies hydrogen, M represents an alkali metal or alkaline-earth metal ion and n corresponds to the valency of M, combined with at least one ash-free detergent and optionally other known additives. Use, for the purpose mentioned in claim 1, of a salt of a sulphosuccinic acid diester of the formula I mentioned in claim 1 combined with an ash-free detergent. Use, for the purpose mentioned in claim 1, of a salt

A novel anti-wear additive to unleaded internal combustion
engine fuels (petrols) contains at least one alkali metal salt or
alkaline earth metal salt of an alkyl sulphosuccinate in
combination with a detergent and, if appropriate, with other fuel
additives known per se.

of a sulphosuccinic acid ester of the formula I mentioned in claim 1, in which the ester groups consist of hydrocarbon residues with from 4 to 20 carbon atoms, combined with an ash-free detergent. Use, for the purpose mentioned in claim 1, of a salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1, in which the ester groups consist of hydrocarbon residues with from 6 to 13 carbon atoms, combined with an ash-free detergent. Use, for the purpose mentioned in claim 1, of a salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1, in which the ester groups consist of hydrocarbon residues with 8 carbon atoms, combined with an ash-free detergent. Use, for the purpose mentioned in claim 1, of an alkali metal salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1 combined with an ash-free detergent. Use, for the purpose mentioned in claim 1, of a potassium salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1 combined with an ash-free detergent. Use, for the purpose mentioned in claim 1, of an alkali metal and/or alkaline-earth metal salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1 combined with a detergent based on polybutene amine. Use, for the purpose mentioned in claim 1, of an alkali metal and/or alkaline-earth metal salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1 combined with a detergent based on polyether amine. Use, for the purpose mentioned in claim 1, of an alkali metal and/or alkaline-earth metal salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1 combined with an ash-free detergent with a molecular weight of from 2000 to 3000. Use, for the purpose mentioned in claim 1, of a potassium salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1 combined with an ash-free detergent in a weight ratio of 1:(8-15). Use, for the purpose mentioned in claim 1, of a mixture of from 4 wt.% to 9 wt.% alkali metal salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1 and from 60 wt.% to 80 wt.% ash-free detergent, the weight being made up to 100 % with carrier oil and/or diluent. Use, for the purpose mentioned in claim 1, of a mixture containing a potassium salt of a sulphosuccinic acid ester of the formula I mentioned in claim 1 and an ash-free detergent, potassium being present in an amount of from 0.2 wt.% to 0.7 wt.%.
